Profile

I'm a front-end developer with a background in electrical and electronic engineering. With over two years' experience as a technical executive, I have killer attention to detail, which means I see issues arising more quickly than others. With the proven ability as a critical thinker, I'm able to devise effective and efficient workflows. To become more creative and to explore my ability to turn people's wonderful ideas into reality, I decided to move into software engineering, the industry with a lifetime of exciting challenges.

Education

General Assembly
Software Engineering Immersive
Aug 2019 – Feb 2020

University of New South Wales
Master of Engineering Science
Jul 2014 – Dec 2016

Key Skills

HTML/CSS/JavaScript

Sass

Responsive Design

jQuery

Bootstrap

Ruby on Rails

React.js

Vue.js

GitHub/BitBucket

Heroku

Express

Node

SQL/Postgres

MongoDB

Amazon Web Services (AWS)

Languages

English

Chinese

Certifications

ITIL Foundation Level

AWS Certified Solutions Architect - Associate

Experience

Software Engineer Intern
Skilligi
June 2020 – Present

- Currently I am responsible for assisting and writing code using JavaScript and Node.js.

Software Engineering Immersive Program
General Assembly
Aug 2019 – Feb 2020

A 24-week intensive full-stack bootcamp, which covers languages, frameworks and modern technical tools include HTML, CSS, JavaScript, jQuery, Ruby on Rails, SQL/Postgres, Heroku, React.js, Express, Node.js and MongoDB etc.

During the period of the program, I completed a number of practical projects:

- Project – “Emaily”, the app allows you to login with Google account, add credit and send survey to multiple recipients. Created with React, Redux, Express, Node.js, MongoDB, Mongoose, applied Google OAuth, Stripe Billing and SendGrid. Deployed on Heroku.
