Profile

I'm a front-end developer with a background in electrical and electronic engineering. With over two years' experience as a technical executive, I have killer attention to detail, which means I see issues arising more quickly than others. To become more creative and to explore my ability to turn people's wonderful ideas into reality, I decided to move into software engineering, the industry with a lifetime of exciting challenges. Having over one-year experience as a web developer now, I'm able to adapt the rapidly changing environment and technology stacks.

Education

General Assembly

Software Engineering Immersive
Aug 2019 – Feb 2020

University of New South Wales

Master of Engineering Science
Jul 2014 – Dec 2016

Software Engineering Experience

Volunteer Web Developer

Code.Sydney

June 2020 – Present

- Build projects with Vue.js.
- Code reviewer, provide comments to other developers' pull request.

Software Engineer Intern

Skilligi

June 2020 – Present

- Responsible for assisting and writing code using JavaScript, Node.js, SCSS, and Ruby on Rails.
- Build WordPress website with Themes, Elementor, and Plugins.
- Provide documentation about workflow, and trouble-shooting process.
- Collaborate with team members via Bitbucket and Airtable.

Software Engineering Immersive Program

General Assembly

Aug 2019 – Feb 2020

During the period of the program, I completed a number of practical projects:

- "Portfolio", a multi-page portfolio, keep learning and growing new skills, continuously refactor with new techs. Created with Vue.js, deployed on GitHub pages, applied responsive design, and tested accessibility with Lighthouse. (<https://bit.ly/3hEQga4>)
- "Find Home", a web app allows you to login with Google account, search and get details of properties for rental. Created with React.js, Express, Node.js, MongoDB, Mongoose, Google OAuth, Domain API, and Google Map API. Deployed on Heroku. (<https://bit.ly/3muibxd>)
- "Health Tracking", a health tracking system which allows you to record your health data, and calculate your BMI (body mass index) to have an overview of your health condition. Created with HTML, CSS, Vue.js. Deployed on GitHub page. (<https://bit.ly/3iGoawv>)
- "To Do List", a simple web application, which allows you to add, edit, delete, highlight, check and search "todos". Created with HTML, CSS, Bootstrap and jQuery. (<https://bit.ly/2ZKgZw4>)

Additional Professional Experience

Technical Executive

HiTV Communications Pty.Ltd

Apr 2017 – Dec 2019

- This company provides in-car electronic devices for dealer all over Australia. I'm solely responsible for providing technical support, including issue diagnoses, analyzing and rectify for "Navigation system" and "DVR system".
- Deliver comprehensive test reports and user guides which over 400 pages.
- Devise effective and efficient processes/workflows which over 200 pages, successfully achieve 5 times more efficient on production.
- Proven ability to undertake multi-task and work under pressure, always setup and customize products for different companies within urgent due day.
- Good team player with communication and corporation skills.
