### Profile

I'm a front-end developer with a background in electrical and electronic engineering. With over two years of experience as a technical executive, I have killer attention to detail, which means I see issues arising more quickly than others. To become more creative and to explore my ability to turn people's wonderful ideas into reality, I decided to move into software engineering, an industry with a lifetime of exciting challenges. Having over two-year experience as a web developer now, I'm able to adapt to the rapidly changing environment and technology stacks.

### Education

#### General Assembly

Software Engineering Immersive  
Aug 2019 – Feb 2020

#### University of New South Wales

Master of Engineering Science  
Jul 2014 – Dec 2016

- Code reviewer, provide comments to other developers' pull request.

#### Software Engineer Intern

##### Skilligi

June 2020 – Nov 2020

- Responsible for writing code using JavaScript, Node.js, and Ruby on Rails.
- Build WordPress websites with Themes, Elementor, and Plugins.
- Provide documentation about workflow and troubleshooting process.

#### Software Engineering Immersive Program

##### General Assembly

Aug 2019 – Feb 2020

During the period of the program, I completed a number of practical projects:

- "Portfolio", a multi-page portfolio, keep learning and growing new skills, continuously refactor with new techs. Created with Vue.js, deployed on GitHub pages, applied responsive design, and tested accessibility with Lighthouse. (<https://bit.ly/3hEQga4>)
- "Find Home", a web app allows you to login with Google account, search and get details of properties for rental. Created with React.js, Express, Node.js, MongoDB, Mongoose, Google OAuth, Domain API, and Google Map API. Deployed on Heroku. (<https://bit.ly/3muibxd>)
- "Health Tracking", a health tracking system which allows you to record your health data, and calculate your BMI (body mass index) to have an overview of your health condition. Created with HTML, CSS, Vue.js. Deployed on GitHub page. (<https://bit.ly/3iGoawv>)
- "To Do List", a simple web application, which allows you to add, edit, delete, highlight, check and search "todos". Created with HTML, CSS, Bootstrap and jQuery. (<https://bit.ly/2ZKgZw4>)

### Additional Professional Experience

#### Technical Executive

##### HiTV Communications Pty.Ltd

Apr 2017 – Dec 2019
